

TO: File *QPC*
 FROM: Richard W. Post, Jr., John D. Schindler *QPC*
 SUBJECT: R.R. No. 102959 / Eva Jones
 DATE: February 06, 1994

INCORPORATION:

On November 29, 1993 I was approached by Mr. Jim Schindler to perform a search for a deed book which was signed by Richard Post. I was requested to do a title search on the Eva Jones property on Route 674 [Faytown] in Fauquier County, Virginia. Mr. Schindler stated that they had received the compilation on 10/26/93 and that Mr. Post had been recorded on it for some time and he needed some assistance.

TITLE SEARCHES:

On 3 December, 1994 I went to the County Building in the Town of Warrenton and to the Fauquier County Circuit Court Clerk's office. There I did a complete title search. I went back to the last will and testament of Charles M. Miller filed 18, September, 1970 off 490 N Street, S.W., Washington D.C. (this was the original owner of the property).

The main claim I was faced with was Charles M. Miller on 17, May, 1972 to William Robert Lee Johnson and Mary Frances Johnson. This transfer of the property was done on behalf of Charles M. Miller through his selected representative (as he was already deceased) John W. White.

The property was again transferred to Stephen Miller Foster and Beverly Ruth Foster (also as a daughter to William and Mary Johnson) on 19, May, 1981.

On 30, July, 1985 Beverly Ruth Foster sold the property to Great Sun Associates Inc., a Virginia mail order and development corporation. This was reported by a Frank Chalky who was the principal in the corporation and Thomas Walker who was the president of Great Sun Associates Inc. (now defunct).

Finally, the property was sold by Great Sun Associates Inc. on 29, April, 1986 to Thomas P. Jones and Eva M. Jones (the present owners).

LOCATION OF THIS INCIDENT:

The location of the Jones residence is on County Route 674 (Faytown Annex) Parcel B-1, L-2337 across from Faytown, Virginia.

4430001

INVESTIGATIONS

I and Lieutenant Foor assigned several officers to conduct an investigation into the Eva Jones complaint. On 3, February, 1994 (Tuesday) we went to the Town of Waukesha and went to the residence of Eva Jones at 10:00 a.m. There we met with Mrs. Jones and Mr. Theodore Johnson a neighbor, who also has a permanent address there well. We first conducted an interview with Mrs. Eva Jones.

Mrs. Jones stated that she and her husband purchased the property on April 3, 1986. That the well for the property was drilled in October, 1985. That when they inspected the property before its purchase from Charles H. Miller she was told that there was asbestos debris on the property? She was told that it was probably from passing by on the roadway (Rpt., 674). She stated that her specifications were really raised when in a conversation with a neighbor directly across the road from her (east) in Peggy Smith (347-3494). Mrs. Smith told her in a passing conversation, asking her if she knew that her house was sitting on top of a cold dump? Mrs. Jones at this point stated to her son specifications. During the inspection of the residence by the Particular County Building Inspector, (W.P. Johnson) he also told her that the house was located on top of an old dump. That a previous owner of the property (Charles M. Miller) was allowing people from around the area to come on the property and dump all types of wastes in an effort to fill the ditch bottoms. Mrs. Jones stated that an area east of the house (which would be down the east side of the house to the roadway, Rpt., 674) was cleared in the spring of 1993. That she and her husband found old tires at the site and along with a large amount of asbestos debris which amounted to several truck loads of trash which were removed from the site.

With her husband confirmed she went to the Particular County Sheriff, Inspector and Health Department about her house being placed over an old dump, which she later described as a fire and open landfill. She also contacted the health of the house regarding the asbestos glass around the house on April, 1986. The health contacted the local health and the state on a non-polluting glass around the property. Regarding art this point they thought nothing of it and thought it was just asbestos building materials left on site or caused by the construction.

As time went on, she and her husband did not part a lot of time but she had a problem with the well water. During the month of January, 1993 Mrs. Jones had taken her son to a Dr. J. C. Gravelle General, MD of the Waukesha General Family Practice (300 Hospital Drive, Waukesha, WI, 53165, 703-349-2700) with Edward Lee and James and possible meningitis. At this time Dr. Gravelle informed her that a water test be taken of the well water. Her son and her had been having these symptoms since late 1991 and the was hospitalized for possible meningitis. Dr. Gravelle also had a 34-year timeline test as a toxin screen which returned in November of 1993 as negative.

In a letter dated 8th March, 1993 from Dr. Garryevert he informed
concerned Dr. Barnes off the Culpeper District Health Department
regarding that there was a disturbance reported to the Coroner involving an
accident to their well water being tested. During April, 1993 Dr.
Barnes also confirmed that a test would be done. Mrs. Jones also
wrote a letter to the Dr. Barnes about a water test and told him that
she had been in contact with Ted Bullard off the Fluvanna County
Health Department about the matter and that they had filed a formal
complaint.

On June 7, 1993 Lauren McCleary took water samples at the residence
labeled at the residence, she is with the Culpeper District Health
Department. On 30th, June a technician in Richmond had performed the
tests and they came back with high PCB readings and results sheet
was marked HIGH PCB & RESAMPLE. After this Mrs. Jones never heard
of the results other than she was told by Ted Bullard that the
results showed everything was fine. She was not satisfied with this
and contacted U.S. Representative Frank R. Wolf regarding her
problem. Representative William J. Turner wrote to Mr. Robert W. Blakes
off the Environmental Health Services section of the Virginia
Department of Health in a letter dated 21st July, 1993. (It should
be noted that when Ted Bullard gave the results to Mrs. Jones about
the first test the Health Department did not examine the water for
heavy metals.)

In a letter from Ted Bullard to Rep. Frank R. Wolf's office he
states that the test left was sent from Department of Consolidated
Laboratory Services and that the sample was taken on 7th June, 1993.
The test was received by D.C.L.S. on 8th June, 1993. On 21st, June
Bullard's office received a partial result which was for pesticides
and inorganic metals. Bullard called Jones residence with these
results and left a message on their answering machine. On 29th, June,
1993 he mailed the results to her. On 29th, June, 1993 she called and
asked why she hadn't received the results from the metals, volatile
organics and inorganic metals. Bullard spoke with a Mr. Robert Poole
off the lab on 1st, July, 1993 and he told him that the metals results
would be delayed because the lab in that area was under renovation.
On 26th, July, 1993 the volatile organics test sheet was marked as
HIGH PCB and the resample. On 27th, July, 1993 Bullard stated that
they contacted EPA Jones about resampling but they were told by her
that the well was dry at that time. They visited the residence on
29th, July, 1993 and confirmed the well was still dry.

After this process Mrs. Jones stated that the Health Department
came to the residence again on 3rd, August, 1993 to resample. She
then had to wait until 28th, August, 1993 to get the test results
which confirmed that there was a high level off PCB in the well
water. But Mrs. Jones stated that she personally did not receive
the results off the test until October, 1993 from Fluvanna County
Health Department after she contacted them on a weekly basis. She
stated that she finally contacted Lauren McCleary and she told Mrs.
Jones that she had no well water was contaminated. The results off
this test showed that the PCB concentration was 30 times greater

that she and her wife accounts for safe drinking water. A third water was contaminated in November, 1993 and subsequent samples at 60 times the limit of PCB. Mrs. Jones' water读书 that the entire family was suffering from some type of skin condition (which she called dermatitis). During December, 1993 her son Andrew complained of eye problems stating that they hurt but there was no discharge or swelling. Early January, 1994 she took Andrew to see Dr. Grawette for the doctor (Dr. Grawette) their family physician. He then took up communication to contact a toxicologist from George Washington University Medical School a Dr. Stokes. Dr. Stokes reported back to Dr. Grawette that the Jones family were living in a health hazard with a high level of PCB. In a letter dated 3, February, 1994 DR. Grawette stated that the son has been exposed to PCBs through Leveles in the wall water. That because of eye and skin complaints, he has advised the Jones family not to drink or bathe in the water.

During our interview I asked Mrs. Jones if there was any collateral on the water or not? She stated that none existed. On this date (3, February, 1994) she stated that the family cannot leave or escape the water. She says about the only thing they can do is wash the dishes in it. This is the air within the house and stated that the family has cleaned the entire walls of the house. They will vacate the house the weekend of 3, February, 1994 and are going to move in with friends in Laredo (Charles & Linda Chavarria off 4-3 Beardscrip Boulevard Street), Laredo, Texas (703-730-1304). Furthermore she stated they will probably seek a rental house sometime in March, 1994 and that the Red Cross has offered to provide the necessary supplies and the Red Cross is near Laredo, Texas. Mrs. Jones further stated that she is the administrator of her son Thomas Chavarria (Chavarria) that they will apply for a loan in Laredo and will use the property to get two medical services. The house is located across from memory dimmed through the U.S. Veterans Administration through Thomas Welch Bank of Houston, Texas.

I asked her if she thought the selling off asbestos would help cure the problem? She stated no, that she has done research and that all the materials are still not cure the problem and is not feasible. She stated that Mr. Charlie Thompson of the Environmental Department of Emergency Services has been trying to warn the people for the past week which has been perceived throughout the Environmental Department of Environmental Quality. Mrs. Jones in her final statement said the greatest fear of her was never told the wall was contaminated when it was placed in and why it is leaking so long to get something done about this problem? I and I asked. He told her that often a wall is usually built and the water is tested for lead, asbestos and other materials which are not dangerous. That the process is in three operation phase and that we were there to get the facts and that things are progressing in the case. We then concluded that the new year and turned to me. The last question which was also present ask the Jones have doing this further test.

INTERVIEW WITH THEODORE JOHNSON:

The interview took place at the Eva Jones residence on 3rd February, 1994. The participants were myself, Richard Fox, Eva Jones, Mr. Johnson and the neighbor to Mrs. Jones and directly next door on the right side of the hill, Mr. Thompson. He too, has a water well connected with "PCE" and is using bottled water. Mr. Johnson's address is Post Office Box 125, Warrenton, Virginia (703-347-7908). Mr. Johnson stated that he first moved into the area in 1968 and has purchased the property through the estate of Charles M. Miller. He has known Eva Jones since 1990 when she and her family moved into the house next door to him.

I asked him when he first connected on how about the contamination of the water wells? He stated that his first contact with the contaminated wells was June, 1993. He found out that his well was contaminated when Mr. Charles Thompson came to his home on 3rd January, 1994 and tested the water from the faucet in the kitchen and came back with the result of contaminated with "PCE". He stated that Mr. Thompson gave him a copy of the fact sheet and the results of the water test. (Mr. Thompson had taken the samples at the expense of Fauquier County and performed by an independent laboratory, Environmental Systems Services, Inc., of Culpeper, Virginia 22701 (703-833-6660). These results showed a concentration of 5.0 ppb, off permitted limits and was conducted by EPA as Desel/Organic Lab Manager.) The sample date was 3rd January, 1994 and analyzed 1st, January, 1994. Mr. Johnson also stated that Mr. Charles Lancaster of the Fauquier County Health Department came and took water well samples the week before (first week of January) from the water system and got 4 or 5 samples from neighboring houses.

Mr. Johnson stated that he has been to the same house for the past 3.7 years and that he built the house himself. His daughter Stephanie has been suffering from asthma and when he looked into it he was told that there was possibly too much (PCE) down in the water.

I asked Mr. Johnson about the abnormalities being made that the Jones house is adding up to off an old dump and asked him what he knew about this?

He stated that he had moved to this area in 1968 which is present. He knew through his parents that the previous owner Charles M. Miller would allow people to come into the area and dump their trash and refuse into a ravine located where the Jones house is now situated and from the established of the houses to the edge of the roadway of Route 674, Fauquier County. He was told this practice was going on throughout the 1940's and 1950's. But that when his family acquired the property in 1968 they put a stop to this practice. He states that other people dumped the trash on the side Mr. Miller would come out and dump dirt over as a part of a reconciliation effort on the property. Mr. Johnson stated that he

watched the Jones house being built and that he saw the contractors digging the basement for the house. He watched them discard old windows, doors, old cycles and machine parts. I asked him if the hard copy correlated with Parfrey or Richard Smith? He stated no, but that he has talked with George Miller who lives near the Jones house and said (Miller in 1943) and that he told him that he watched the County self-purification dumping the Clark area. Mr. Jefferson stated that he well knew that Clark owned 3,600 acres which was Amalgamated in 1943. That Mr. Jefferson off the county trail during his inspection's office supervised the same for the Jones house and recommended a classifier for about an old dump over the property where the Jones house is now situated. Mr. Jefferson stated that he is now entitled water and does not use the well water and that he does have hot water supplied to him.

INTERVIEW OF POLICE INSPECTOR

I and Elizabed Pooch after leaving the Jones residence were proceeded to the residence of Mr. Roland Tapscott. Tapscott is located approximately one quarter of a mile to the north of the Jones residence on the south side of Route 674. We arrived around 11:30 A.M. Tapscott on 3rd February, 1944 at 12:30 p.m., I asked Mr. Tapscott how he found out about the Eva Jones well contaminated and what action he took on it? Mr. Tapscott is a former member of the Pennsylvania Game Commission (Game warden) Mr. Tapscott stated that this all started about a week ago (September or October, 1943) when Eva Jones called him and informed him off the pollution she was having. That Mrs. Jones called him after she had been called by her doctor as to the possible contaminated water off the well starting all off the Jones place by health problems within recent months and the past two years.

Roland stated that he was in a conversation with Mr. James Burmfield about country planning issues he happen to mention the problem that Eva Jones was having and that something should be done about it. Mr. Burmfield is the Supervisor of the Pennsylvania Game Board of Supervisors and the Supervisor for the Chester Distric off the County of Pennsylvania. He stated that Mr. Burmfield told him he would contact the Va. Dept., of Environmental Quality and notify them of the emergency Services Director to get something done about the situation.

Mr. Tapscott stated that he has been a member of the P.A.C.W. since 1932 and has lived in Pennsylvania country all off his 71 years.

We discussed the original owner of the property during the dump reg and I asked him what he knew ledge was in that area and that he might know about the dump? He stated that a person by the name of Miller owned the property and that Miller was a judge in the court system in Washington D.C. That there was a warline in the area off the Jefferson and Jones residences. He mentioned in 1952 when he moved into the area that Miller left people dump trash into this ravine to fill it up. He stated that the ravine was the ravine built from the south side of the Jefferson house to the north side of a

white duplex houses now owned by Audrey Graham. That he thought the Town of Warrenton dumped refuse in there. That while duplex the structures is the house that Miller built as a garage and barn but his wife did not like it in the area so he sold the property to the Johnson family in 1968. He stated that when Mr. William Johnson died (or became) he divided the property and that his children Theodore and Beverly (Foster) Johnson both got a section of the property. Then in 30 July, 1985 Beverly Foster sold her property to the Great Run Association Inc., and Theodore kept his property and built a house on it. A Mrs. Audrey Graham bought the white house and came to the planning commission and requested to make the house into a duplex for which that was granted.

He is when Foster sold the property to Great Run Association Inc., what they were the ones who had the house built on the property. I asked Mr. Tapscott what was in the dump? He started to his knowledge that anything and everything imaginable is in there. I asked him if he ever knew people by the name of William & Clarence Lewis? He stated yes, they own the corner lot and Route 674 and 674 and that they were married school teachers. That they live in the Madisonboro area off Warrenton. I asked him if he knew of any dairy farmers in the Warrenton area? He stated yes, there was the Panguitch Laramie which operated there since 1939 or 1940 and is still going. He stated that there was another by the name of Carriage House that it is now out of business.

I asked him if there was any other dump areas on Route 674? He stated no, that the only one he knew of was on the Jones and Johnson property. That the area has one great big drop off from the roadway.

I asked him if there was any concern on his part about this well being art work? He stated that its well its in a little ditch the Jones and others walls in the area. That there is a creek which these walls drain to (Turkey Run). He fears that there may be a perchance which an aquifer possibly leakage may affect other houses with the farmed off a police from the Jones/Johson area. His fear focuses on this police because he stated when they drilled the well for this because it went down 300 feet. That when they went through the bedrock the drill never touched bottom. That he feels there may be a underground stream or lake there and the police could travel this way.

I asked him how the dumping was done on the Miller (Jones/Johson) property? Mrs. Tapscott stated that people would thorough a garage where the drive way to Jones because is now and dump on the left or the right. People knew just about everything in there but he never saw any barrels go in there.

I asked him where the Town of Warrenton water lines run specifically to the Jones house? He stated that the town annexed two bay-pass and that everything west of the bay-pass is now in the town. That

The water line from Palmerston Street goes to Cedar Run the bypass and the head leaves the culvert line at Bank Street and Route 673 which is near the Virginian Department of Transportation garage on Route 673. Plaintiff, he stated that he was disappointed in getting the ball and being on this line and that he would be kept informed on the status of the line, he thanked him for his time and assistance and left his residence.

INTERVIEW WITH JAMES G. BURGFIELD:

Mr. Edward Fox and Chuck Thompson met at the County Auditor's office with Mr. James Burghfield and discussed the Eva Jones matter. This discussion occurred on 1, February, 1994 at 3:30 p.m. He stated Mr. Burghfield in the conversation advised him he acknowledged off duty business interests in the State Auditor area? He stated that he knew off two, Carrollage House and Paragonair Laundry. He stated that they were owned by a Smalley Carter and sold to Frank Noland (deceased). That they had a dry cleaning service throughout the country.

He asked Mr. Burghfield how he became aware of the Eva Jones and Theodore Johnson parcels? He stated that he first met Burghfield in April, 1993 during lunch about the contracted services in Fayette.

On 5, January, 1994 he was contacted by Eva Jones and she informed him off the parcels she was having. She told off contractor she had made and what the doctors had told her. Mr. Burghfield stated that after the contacted Chuck Thompson he was informed further off the health problems and about Dr. Garavette's letter about the health hazard act the residence and that they should have the well tested and what she made contact with other agencies during March, 1993. He stated that he contacted Charles Shepherd from the County Health Department regarding the water well testing. He stated that Shepherd told him that field work was being conducted but that he did not know the status and mentioned the location off O.C. L. S., as following up the results. Mr. Burghfield stated he then called Chuck Thompson about getting the wells tested through a private lab to be processed.

On 6, January, 1994 he visited the site and discussed the parcels with Royal and Tapscott who he stated the dump was situated around 3:30.

On 7, January, 1994 he stated that he asked Chuck Thompson to provide a map showing the areas affected by the contamination and then indicated a request for Department of Environmental Quality assistance. At 1730 hours he checked on the environmental status of D.E.Q., assistance.

On 9, January, 1994 he contacted Edwin Gralich who is a soil scientist with the W.S. Department of Agicultural/Soil Conservation Service for that area. He requested reports and testing results for soils in that area. He stated that there was a

Let off concerns that the area off from the Jones/Tolson property was possibly grading into Turkey Run which flows into Cedar Run and affects the future dam project they are working on and planning in the Auburn area know as the Auburn Dam project and possible water contamination.

On 9, January, 1994 he contacted and met with Tom Green chairman of the Indiana Marshall soil conservation group and met with the group on 10, January, 1994 to inform them and get their report as to the soil in the area and potential problems they face.

He stated that he sent a letter to the Director of the Department of Environmental Quality, Mr. Richard Burton. This was to request consideration of application for activation of the Wabash Emergency Response Fund. He stated that they (the country) had tested 7 domestic wells and they all came up negative or within limits except the Jones and Tolson wells.

On 14, January, 1994 he stated that Mrs. Party Baker talked with Director Burton about activation of the fund. That on 17, January, 1994 he was told that Mrs. Jones grass giving up and seeking another residence as soon as possible. Mr. Burroughs further stated that he received a telephone call from Tom Eason of the Fairport Citizen (the local newspaper) about the Jones residence and that it was been published on 28, January, 1994.

I then asked Mr. Burroughs more about the Auburn Dam project? He stated that the water treatment area would be down stream from the junction of Turkey and Cedar Run and construction of the dam would be sometime in 1997 which is within the Ossipee watershed. He stated that Charles Hall (703-345-3400) lives in Fair Oaks and maintains Roland Paper Mill on the Fairport Community and that his property touches Cedar Run. That he had his well treated independently and that it came back negative for contamination. Finally, he stated that Mr. Bullock (703-347-8744) is the engineer who has the dam project plans and would assist if needed. The interview was concluded and he was advised that the department was continuing and looking into the Department of Environmental Quality.

INTERVIEW w/ CHARLES HALL & LINDA TOLSON

We then went to the offices of the county engineer and met with Mr. Barry Harkins the Soil Scientist for Fairport County and Linda C. Wilkefleir county engineer. This took place at 3:30 p.m., 14 February, 1994.

I asked Mr. Harkins several questions about the soil structure in that area. This focused on the possible direction of the plume and how far it could travel? He stated that there was no limestone in

that area and the structure was made of what is called Greenmud. That soil soil maps show drainage to the west in the direction of Turkey Run. There is a geological change in that area near the roadway there is a different soil type. The soil type in that area is of certain type and there is a difference of about two inches. The seed which if there is movement of a plow that may be moving along a ridge in the backroads at that location and going in the direction of the Johnson residence which is a north-south direction. Mr. Hartshorn made reference to a rancher person who very knowledgably off the soil structure and the geological features of the area he referred to Mr. Sam Coffey Jackson who works for Virginia Department of Health for the Appalachian Region District cut of Culpeper, Virginia. We also discussed the plow which he had reviewed off the area. He stated that if we could return the next day they would have time to look for the soil marker in the location the plow was taken in 1958 and others some figures off a ravine area.

On 2, February, 1994, we met again with Harry Hartshorn & Leanda Ulrich in their offices. They showed us an agricultural aerial photo taken in 1958 and its shows where the Johnson and Jones houses now sit. It shows a large ravine at the edge of the roadway and sloping down a through the west end near Turkey Run. There appears to be no sign of clearing but a lot of sand. The photo was taken at a very high altitude approximately 34,000 feet. Mr. Hartshorn stated that he felt the plow may be running off or along the ridge and the geological shift which occurs near the roadway of Route 674. They both stated that they would keep in touch and notify the department if they hear of anything else or locate any other soil photos off the area.

INTERVIEW BY MRS. JUDY REEDEN OF MR. RICHARD GRANT

I and Richard Reed met with Mrs. Judy Reeden (wife of State Delegiate Hartshorn) at the Office of Emergency Services in the Hampshire County Sheriff's Office building in Martinsburg. This took place on 2, February, 1994 at 10:00 a.m. Present were myself, Richard Reed, James Belmont, Ed. Burkhardt Grant (Appalachian Co. Sheriff Dept.) Chuck Thompson (Delegiate, Emergency Services) Shelia Shephard, County Health Department and his wife. We discussed the past history of dry cleaning operations in the Martinsburg area. Ed. Grant stated that he has been a passenger by the name of Murphy who owns a marquis off the Hampshire Turnpike for many years and lived in an old school type building on the property now owned by Billie Jean & Clarence Lewis (former residents off Route 670 & 674). Ed., Grant stated that there has always been the question of what the dry cleaner established did with the residual "PERC" after being used. He stated that the dry cleaners were both owned by Eddie Mullins who is now deceased.

He stated that when the Eric Campbell property is now which is south off Rural Jones property was once owned by the Strode family. He stated that most off his knowledge Murphy lived on that property for

the good part of nearly 35 to 40 years.

Mr. Givard gave the names of several other people who worked at the dry cleaners over the years and he thought they might be able to provide some information. Mr. Givard mentioned the name of Eddie Hallinan who worked at the agency and knew a person by the name of Strickley Carter or Peter Carter who worked for Hank McLaren for many years. He stated that they lived on Green Street. Chuck Thompson looked them up in the 911 register and showed an address of 139 Green Street (703-347-9671). Mr. Givard also mentioned the name of Gloria Wallen who would know the history of the Eva Jones property 310 Green Street, Warrenton, (703-347-3234).

Richard Poole talked with Mrs. Hartman about the Eva Jones and Theodore Johnson properties. He informed her why responsible business men what they do and that we were in an investigative capacity at this time. Richard informed her what had taken place and what steps were being taken to remedy the problem.

She was informed that the Office of Environmental Health & Recreational was involved and when it was involved. That O.E.R.R. was notified in October of 1993 and that we were completing the investigation to be forwarded to the appropriate division within the Department of Environmental Quality.

INTERVIEW OF CHEMIST SPECIMEN (Patricia Co., Emergency Services)

I and Richard Poole recently interviewed Chuck Thompson on 3, February, 1994 at his office at 3:00 p.m., about the Eva Jones scandal and his involvement. Mr. Thompson stated that he was contacted by Eva Jones by telephone on 5, January, 1994 about her well water being contaminated. He stated that shortly after that he contacted Mr. James Brundrett (Chairman, County Board of Supervisors) about Eva Jones' problem at her residence. Mr. Thompson stated that Eva Jones had three septic tanks installed from her residence from the kitchen faucet. First sample did not test for total coliform organisms, the second sample was 80 times the allowable limit for "fecal" and the third sample was 60 times the allowable limit.

On 14, January, 1994 Chuck Thompson had forwarded to the office of the State Health Department copies of laboratory tests results from Environmental Systems Ltd., (78 West Duke Street, Warrenton, Virginia 22186). These results were from three samples which he took from various locations around his home.

Listed are the test chemicals which were sampled:

9133

Chlorine

6008

Borrell L

MR300011

B.3.0.9	Cazeault
B.3.4.6	Hershey
B.3.3.1	Smith
B.3.4.3	Conman

Officer Black who Jones considered the only residence that neglected Penchill property has been the defendant Johnson residence which neglected 53.0 property notwithstanding all others neglected negligible. Mr. Thompson stated that on 7th January, 1994 he found out that Eva Jones had taken her son to the doctor and that is when the health hazard was announced, and when Mrs. Jones started the great scene realized she started to deliver the sanitary containers that night off the 7th.

Mr. Thompson had stated (in a meeting this date 3-2-94) that Parke County was a landlord and participant of Great Run Associates Inc., and that Tom Wadie was president of Great Run Associates Inc., (the real estate company that sold the property to Eva Jones).

Mr. Thompson stated that he has been working to get some further work done on the site and has been in touch (on a regular basis) with Richard Fox about the progression of the complaint at the state level.

INTERVIEW BY OFFICER ANTHONY TOWN MANAGER, TOWN OF WATKINSON:

On 3rd February, 1994 at 3:00 p.m., I met Richard Fox met with Mr. John Armstrong in his office at the Town of Watkinson Office. He stated here he was notified about the Eva Jones residence and what he knew about the possible developments of the town's trash disposal because of this location on Route 674 (Fayeton).

Mr. Armstrong stated there was nothing about the problem at the Jones residence by Mr. Conley Thompson (Formerly Emergency Services). He stated they did a lot of checking through past town records and did not find anything that referred to the town of Watkinson dumping refuse in the site of the Jones residence on Route 674. He stated that he was told about the private dump and the possibility of possible dairy cleaning solids from the dairy cleaner business possibly being dumped on the hillside. He stated that the Town of Watkinson since 1973-74 has used a city owned truck to dispose of the town's refuse.

He, the City Attorney Paul Marshallough and Mayor J. M. Laurel subsequently looked into the records back to the 1940's and found that the records were very bad. He mentioned that the mayor told him that there was an old dry cleaner by the name of Farnsworth who was located on 1st Street in the town. Mr. Arredondo further stated that the mayor has been in office since 1953 and had no record of any dumping in that area. Mr. Arredondo stated that the mayor gave him the name of Leander Bill who may have been a manager (household) at 103 Farnsworth Street (347-2703). Mr. Arredondo further stated that there was no trash anywhere in the dumping in any manner and that there are no records from the town that Leander

PERMITTING SITE INSPECTION (EXCULPTOR CEMETERY)

During the day of 3, February, 1954 while at the office of Mr. Chuck Thompson and after the weekend of 9 & 10 February Richard Pope and I obtained the permission of property owners to inspect their property for the possible location of abandoned caskets. We contacted and received permission from the following local owners:

Mr. & Mrs. William Daniels
Mrs. Eva Campbell
Mr. Michael Walker
Mrs. Eva Jones
Mrs. Julia White

Mr. Andrew Graham / declined his permission on his property.

This inspection was to locate possible caskets or abandoned barrels possibly placed there from years ago when a man by the name of Ashby (dwelling at the intersection of Route 670 & 674) may have placed them there. Ashby was known to have been a past manager of the Farnsworth Laundry years ago and he deceased. Mr. Richard Pope and Chuck Thompson (Farnsworth Laundry) contacted with the property owner Route 670 on the Hillman and Clara Lewis property. We walked northbound to the Hillman and Clara Lewis property. We walked northbound to the Hillman and Clara Lewis property. We walked eastbound to the Clara Lewis property. We walked southbound to the Clara Lewis property. We did not locate anything significant but did locate a faint wall which we believed to be a old dump site on the Hillman property. There were no other signs of any dumping, a note of the topography and the geological lift in that area makes it doubtful that the contamination could have spread from this location to the Lewis property. The topography from this area goes into a downward slope and drains into Turkey Run which is to the west of the properties.

VIDEOLITHOGRAPHS & RECENT PHOTOGRAPHS

During the afternoon of November 3, 1994, Mr. James Jones (photographer), I, and a member of the prospecting party observed what appears to be the last occurrence of the Locality off Turkey Run which occurred about 1930. The Locality off Turkey Run is located immediately to the south of the Locality off the old dump site and the Locality off the Jefferson mine below. It also shows the Locality off Turkey Run with the same grade approach of the area. Numerous photographs of the mine and general area were taken by Michael Ross.

Other prospecting locations on Section 670 (William S. Clark Ledges property) have several photographs of the area which reflect the expected old dump areas on the William White property.

On 3-4, February, 1994 I and Michael Ross went to the Blackhawk Ranchhouse in Colleges Park, Maryland. There we reviewed photographs of old aerial photos that were taken by the U.S. Soil Conservation Service during 1937. This photo from April 1, 1937 shows the gully which reflects the Jones and Jefferson mines and their workings. It depicts the size of the gully area and shows the topography and geological features of the area. The top of the gully (extending into Route 674) moves westward and divides into a narrow funnel shape as it approaches Turkey Run. It gives the reader a general indication to the topography as it appeared relatively before there was any filling done in that area.

These aerial photographs were taken in a park and upon inspection will be unclear further research. This could except to measure the copies within 3 to 4 weeks from the date of this writing.

SUMMARY:

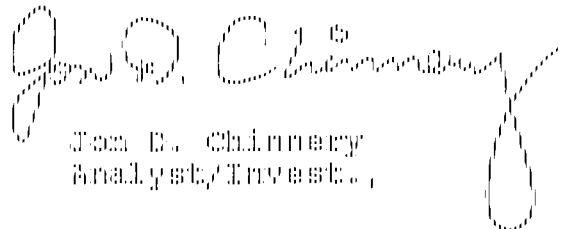

All readings on the area off Routes 670 & 674 which exception of Jones and Jefferson mine names made negative as a result of greater tests conducted by Pennsylvania Geological Survey Services. That the Jones and Jefferson mine workings are top of arch in close proximity to the old Jefferson mine which was operated by Charles W. Miller during the 1940's and 1950's. The topography of the area and the geological topography reflect the fact that it has changed little in the last 50 years and that it has disappeared in a somewhat different way Turkey Run.

In conclusion from S.G.I. Geologist from Pennsylvania Geology (Dandy Hedges) stated that it is possible that there is a large volume moving all along the ridge and toward the Jefferson mine location. That it is possible that the ridges of the well at the Jones mine may have started or still be moving as they moved in a small distance at 10 feet when drilling. That Mr. Hedges stated that this would not be common for that area supported by the geological features and topography.

COMPLAINT: SUBJECTS:

The complaint is made against Lawrence Corporation, and others, and the following respects is turned over to Mr. Richard Fox, as Lead Investigator of the Erva James incident.

Respectfully Submitted:

John D. Chinnery
Ballyshannon, Invest.,

cct: Mr. Richard E. Fox, Jr.
Mr. Brett A. Bullock
Mr. James A. Sartreca
